

Dear Amira Customer,

Once successfully installed, Amira has to be activated with a license key. In order to issue a license key to you, we need the Computer ID of your workstation and the License Serial Number of each product you desire to activate. Each product is locked to a specific Computer ID, this means that this product will execute only on the system(s) for which it is licensed.

How can I find the Computer ID?

In order to obtain the Computer ID please start Amira and choose Help/License Manager. If no license is installed, the license manager pops up automatically upon the start. The License Manager will show your Computer ID in the rightmost text field (see image below, field "Computer ID").

Where can I find the License Serial Number?

Each software license you purchased has a License Serial Number indicated in the delivery note you received via email. In the delivery note, you will find an entry for every license you purchased. Each of these entries contains a different serial number starting with 257-. These are the License Serial Numbers of the respective licenses.

What should I do to permanently activate Amira?

Please go to <http://www.amira.com/lkr> and provide your Computer ID along with your License Serial Number(s) and contact information.
